Application/Control Number: 09/814,618

Art Unit: 2625

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 11, 14, and 24 are rejected under 35 U.S.C. 102(b) as being anticipated by Moser et al.

As to claim 1, Moser teaches a three-dimensional image grabber comprising: a pattern projecting assembly for simultaneously projecting at least two phase-shifted patterns onto an object (column 8, lines 24-30); each of said projected patterns being characterized by a predetermined bandwidth (column 8, lines 24-26); and an image acquisition apparatus sensitive to said predetermined bandwidths for simultaneously taking an image of each of said projected patterns on the object (580 in figure 5).

As to claim 2, Moser teaches at least one of said predetermined bandwidth includes a single wavelength (column 12, lines 30-31).

As to claim 11, Moser teaches that the image acquisition apparatus includes at least one camera sensitive to said predetermined bandwidth (column 11, lines 44-49, column 12, lines 30-31, and 580 in figure 5).

As to claim 14, Moser teaches that the camera is selected from the group consisting of a Charge Coupled Device (CCD) camera and a Complementary Metal-Oxide-Silicon (CMOS) device (column 11, lines 44-49).

As to claim 24, Moser teaches a three-dimensional image grabber comprising: a means for simultaneously projecting at least two phase-shifted patterns onto the object

Application/Control Number: 09/814,618

Art Unit: 2625

(column 8, lines 24-30); each of said projected patterns being characterized by a predetermined bandwidth (column 8, lines 24-26); and a means for simultaneously taking an image of each of said projected patterns on the object, said image taking means being sensitive to said predetermined bandwidths (580 in figure 5).

- 2. Claims 3-10, 12, and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 3. Claims 15-23 are allowed.
- The following is an examiner's statement of reasons for allowance: prior art fails to teach a system and a method for measuring the relief of an object, said system comprising: a pattern projecting assembly for simultaneously projecting at least three phase-shifted patterns onto the object; each of said projected patterns being characterized by a predetermined bandwidth; an image acquisition apparatus sensitive to said predetermined bandwidths for taking an image of each of said at least three phase-shifted projected patterns on the object; each of said images including a plurality of pixels having intensity values; and a controller configured for: a) receiving from the image acquisition apparatus said at least three images of the projected patterns onto the object; b) computing the object phase for each pixel using the at least three object intensity values for the corresponding pixel; and c) computing the relief of the object at each pixel position using said object phase at the corresponding pixel position.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Page 4

Application/Control Number: 09/814,618

Art Unit: 2625

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Svetkoff et al is also cited.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yon Couso whose telephone number is (703) 305-4779. The examiner can normally be reached on 8:30 am –5:00 pm from Monday to Friday

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bhavesh Mehta, can be reached on (703) 308-5246. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3800.
